

Executive Summary & Recommendation

Which genre, platform and region should be prioritized for a future game portfolio?

KEY FINDINGS

- Action generated the highest total sales (416.98M), but its hit rate was only 11.81%.
- Shooter achieved the highest hit rate (32.45%) with 267.81M total sales, indicating stronger per-release performance.
- For Shooter releases in 2014–2015, XOne (61.90%, n=21) and PS4 (61.11%, n=18) produced similar hit rates.

RISKS & LIMITATIONS

- The analysis uses historical 2012–2015 data and should not be treated as a current-market forecast.
- Sales represent unit volume, not revenue or profit; development cost, pricing and marketing spend are unavailable.
- Digital-sales coverage and overall market completeness are not verified.
- Platform comparisons use limited sample sizes; similar hit rates do not prove that one platform causes better performance.

RECOMMENDATION

- Prioritize the Shooter genre for North America and Europe.
- Use PS4 as the primary platform: its hit rate was similar to XOne, but it delivered higher total and median sales.
- Use XOne as a secondary, North America-focused platform.
- Do not apply the same Shooter strategy to Japan; evaluate a separate Role-Playing portfolio.
